

Technical Design Document

Request for Certificate of Compliance

Submission & Commission Decision Management System (SCDMS)

DOCUMENT CONTROL

Prepared by	Herman Tevilili Innovation Policy Development Unit Office of the Public Service Commission
Submitted to	Department of Digital and Communications Technology
Date	May 2026

1. Executive Summary

The Innovation and Policy Development Unit (IPDU) is developing the Submission & Commission Decision Management System (SCDMS) - an internal digital platform to replace the manual, paper-based process by which Line Ministry HR departments send their submissions to the OPSC for commission deliberation and decision.

This document constitutes the Technical Design Document submitted to the Department of Digital and Communications Technology (DCDT) in fulfillment of Section 3(f) of the Digital Transformation Act No. 42 of 2025, formally requesting a Certificate of Compliance (CoC) before full development and deployment proceeds.

The SCDMS is developed entirely in-house by the IPDU. No external procurement of software licences is required. The system is built on open-source, standards-compliant technologies and will be hosted on a DCDT-managed virtual server.

Since the initial version of this document, the SCDMS has undergone substantial development. The system now encompasses a 22-stage workflow covering the full submission lifecycle from ministry draft creation through to implementation reporting; a comprehensive security framework aligned with ISO 27001 and the Vanuatu Cybersecurity Strategy 2030; a real-time dashboard and analytics module;

commission task management; meeting and agenda administration; a vulnerability scanning module; and an integrated audit trail and security incident management system.

2. Legal Basis for This Submission

The Digital Transformation Act No. 42 of 2025 establishes the legal framework governing all government ICT systems in the Republic of Vanuatu. This submission is made in direct compliance with that Act.

Act Reference	Requirement	This Submission
Section 3(f)	All government ICT systems must obtain a Certificate of Compliance from the DCDT certifying adherence to national digital standards before implementation	This document is the Technical Design Document required to support the CoC application
Section 6(2)(b)	The Director of DCDT has the power to suspend any government ICT project that proceeds to funding, procurement, or implementation without a valid CoC	The OPSC IPDU has paused full production deployment pending receipt of the CoC

The OPSC acknowledges that under Section 6(2)(b), proceeding to deployment without a Certificate of Compliance would expose the project to suspension by the Director of DCDT. This submission is therefore made at the post-architecture, pre-deployment stage - the appropriate point at which the DCDT has sufficient technical detail to assess compliance, and before any production infrastructure is commissioned.

3. Business Justification

3.1 Problem Statement

Currently, the PSC submission process relies entirely on physical documents, email attachments, and manual tracking by PSC Officers. This results in:

*All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen*

- No centralised visibility of case status for Ministry HR departments
- Manual reference numbering with risk of duplication and loss
- No enforceable audit trail of workflow decisions
- No mechanism to monitor the 21-working-day assessment deadline
- Commission decisions communicated informally and inconsistently
- No structured tracking of post-decision implementation progress
- No visibility into security incidents or system access patterns

3.2 Proposed Solution

The SCDMS provides a fully integrated digital platform encompassing:

Submission Lifecycle Management

- Ministry HR staff create submissions as drafts from within their ministry scope; submissions progress through a structured 22-stage workflow from draft creation to implementation report
- Automated unique reference number allocation
- 21-working-day assessment deadline calculation and monitoring
- Returned-for-clarification workflow enabling PSC to request additional documentation from ministries before accepting a submission
- Deferred, Tabled, Awaiting Legal Advice, and Awaiting Cabinet Decision hold states reflecting real commission practice

Commission Operations

- Meeting scheduling and management with meeting type classification (Ordinary / Special sittings)
- Agenda item creation linking submissions to meeting agendas
- Formal commission decision recording: Approved, Rejected, Returned, Tabled, Deferred
- Commission task creation and assignment to OPSC Managers for post-decision implementation tracking
- Decisions log for historical review

User and Role Administration

- 12-role RBAC model enforced server-side on every API endpoint
- Custom role definitions with granular permission flags
- Full user lifecycle management: create, edit, deactivate, reassign
- Ministry and department hierarchy administration

Security and Compliance Framework

- Full audit trail of every workflow transition, system action, and administrative change
- Security incident creation, categorisation, and resolution tracking
- Automated vulnerability scanning using static analysis (Bandit) and dependency CVE checking (pip-audit)
- Security notices: admin-created system-wide alerts displayed to all authenticated users
- Phishing and social engineering awareness module for all staff
- Password complexity policy configurable by administrators
- Password history and reuse prevention
- Rate limiting on all sensitive authentication endpoints
- Two-factor authentication (OTP) infrastructure - ready for activation

Analytics and Reporting

- Real-time dashboard with KPI cards: total submissions, pending count, monthly intake, average processing time
- Submissions by stage, ministry, and month with Recharts visualisations
- CSV export of submission data
- Global search across submissions, tasks, and ministries scoped to user permissions

System Administration

- Key-value system settings store for runtime configuration
- Backup creation and restore capability
- API key management for system-to-system integration
- System security audit: configuration health checks against production security standards
- API endpoint inventory

3.3 Scope

In Scope	Out of Scope
Ministry draft submission creation	Integration with HRMIS (planned Phase 2)
22-stage workflow management	Payroll system integration

Commission decision recording	Public-facing citizen portal
Decision implementation tracking	Optical character recognition (OCR) on uploaded documents
Meeting and agenda management	Electronic signature framework
Commission task assignment	Cabinet system integration (planned Phase 3)
User and role administration	National archival system integration
Security incident management	SMS notification delivery
Vulnerability scanning (SAST + CVE)	e-Government SSO (planned Phase 2)
Analytics and reporting dashboard	AI-assisted document summarisation
Backup and restore	Full-text search engine (PostgreSQL FTS is implemented)
Global search	Celery/Redis distributed task queue (in use for v1.0)
API key authentication	
System configuration management	

4. System Architecture

4.1 Architecture Overview

The SCDMS follows a standard three-tier web application architecture. All three tiers run on a single DCDT-provisioned virtual machine. The PostgreSQL database binds to localhost only and is not accessible from any external network interface.

Internet → Nginx (HTTPS, TLS 1.3) → Unicorn → Django REST API → PostgreSQL
↓
React SPA (served as static files by Nginx)

The React single-page application is compiled to static files at build time and served directly by Nginx. All API requests from the browser are proxied by Nginx to Unicorn/Django over the local loopback interface. This single-server model is appropriate for Version 1.0, estimated to serve fewer than 200 concurrent government users.

4.2 Technology Stack

Backend

Component	Technology	Version	Licence
Web Framework	Django	≥ 5.0	BSD (Open Source)
API Framework	Django REST Framework	≥ 3.14	BSD (Open Source)
Authentication	djangorestframework-simplejwt	≥ 5.3	MIT (Open Source)
CORS Policy	django-cors-headers	≥ 4.3	MIT (Open Source)
Account Lockout	django-axes	≥ 6.0	MIT (Open Source)
IP Rate Limiting	django-ratelimit	≥ 4.0	MIT (Open Source)
Database Driver	psycopg (async)	≥ 3.1	LGPL (Open Source)
Image Processing	Pillow	≥ 10.0	HPND (Open Source)
Background Jobs	Celery + django-celery-beat	≥ 5.3 / ≥ 2.5	MIT (Open Source)
Static Analysis (SAST)	Bandit	≥ 1.7	Apache 2.0 (Open Source)
Dependency CVE Scanning	pip-audit	≥ 2.6	Apache 2.0 (Open Source)
Environment Config	python-dotenv	≥ 1.0	BSD (Open Source)
Runtime	Python	3.12	PSF (Open Source)

Frontend

Component	Technology	Version	Licence
UI Framework	React	18.2	MIT (Open Source)
Build Tool	Vite	5.x	MIT (Open Source)

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Routing	React Router DOM	6.x	MIT (Open Source)
HTTP Client	Axios (with JWT interceptors)	1.x	MIT (Open Source)
Styling	Tailwind CSS	3.x	MIT (Open Source)
Accessible Primitives	Headless UI	1.7	MIT (Open Source)
Icon Library	Lucide React	0.344	ISC (Open Source)
Charts	Recharts	2.x	MIT (Open Source)
Class Utilities	clsx	2.x	MIT (Open Source)
CSS Processing	PostCSS + Autoprefixer	-	MIT (Open Source)

Infrastructure

Component	Technology	Version	Licence
Web Server / Proxy	Nginx	1.27	BSD (Open Source)
Application Server	Gunicorn	Latest	MIT (Open Source)
Database	PostgreSQL	15.x	PostgreSQL Licence (Open Source)
Operating System	Ubuntu Server 22.04 LTS	22.04	Free / Open Source
Containerisation	Docker + Docker Compose	Latest	Apache 2.0 (Open Source)

No proprietary software licences are required. The entire stack is open-source and creates no ongoing vendor licence dependency for the Government of Vanuatu.

4.3 Network and Traffic Flow

- All user-facing traffic is HTTPS only - plain HTTP redirects to HTTPS
- Database listens on 127.0.0.1 only - no external database port exposed
- Gunicorn listens on 127.0.0.1 only - not directly accessible from outside
- Django ALLOWED_HOSTS set to the provisioned government hostname only
- CORS restricted to the DCDT-provisioned government hostname

5. Data Architecture

5.1 Data Residency

All data is stored exclusively on the DCDT virtual server located at the DCDT data centre in Port Vila, Vanuatu. No data is transmitted to or stored on any commercial cloud service (AWS, Azure, Google Cloud, or similar) at any time.

This satisfies the data sovereignty requirements applicable to government systems under the Digital Transformation Act No. 42 of 2025.

5.2 Data Classification

Data Category	Classification	Justification
PSC submission content (case titles, descriptions, notes)	RESTRICTED	Sensitive HR case information relating to public servants
Workflow audit trail (all transitions, actors, timestamps)	RESTRICTED	Sensitive administrative government record
Commission decisions and formal outcomes	RESTRICTED	Legally significant government decisions
Security incident records	RESTRICTED	Sensitive operational security data
Security scan findings	RESTRICTED	Vulnerability information - not for public disclosure
Password history hashes	RESTRICTED	Security control data
API key records	RESTRICTED	Authentication credentials
User account data (username, email, role)	OFFICIAL	Standard government employee directory information
Commission task records	OFFICIAL	Post-decision implementation tracking
Meeting and agenda records	OFFICIAL	Government administrative records
System settings and configuration	OFFICIAL	Operational configuration - SMTP credentials masked
Ministry and department reference data	PUBLIC	Names of government institutions

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Form category reference data	PUBLIC	Administrative classification data
Dashboard statistics (aggregate counts only)	PUBLIC	No individual-level data exposed

5.3 Data Schema - Complete Entity Reference

The SCDMS comprises 23 database tables across four functional domains.

Reference Data Tables

Table	Purpose	Classification
tracker_ministry	Government ministries - code and name	PUBLIC
tracker_department	Departments within ministries	PUBLIC
tracker_formcategory	PSC submission form type classifications	PUBLIC
tracker_referencecounter	Sequential reference number generator - ensures unique submission IDs	OFFICIAL

User and Access Control Tables

Table	Purpose	Classification
auth_user	Django standard user table - username, email, PBKDF2-SHA256 hashed password	OFFICIAL
tracker_profile	Links user to role, ministry scope, department scope, profile picture	OFFICIAL
tracker_roldefinition	Named custom roles with associated permission sets	OFFICIAL
tracker_systempermission	Granular capability definitions (e.g. SUBMISSION_CREATE, MEETING_MANAGE)	OFFICIAL
tracker_apikey	Hashed API keys for system-to-system authentication - last-used timestamp tracked	RESTRICTED
tracker_otptoken	One-time password tokens for two-factor authentication - 6-digit codes with expiry	RESTRICTED

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

tracker_passwordresettoken	Single-use password reset tokens with 1-hour expiry	RESTRICTED
tracker_passwordhistory	PBKDF2 hashes of previous passwords for reuse prevention	RESTRICTED

Submission and Workflow Tables

Table	Purpose	Classification
tracker_submission	Central case record - title, ministry, department, current stage, deadlines, implementation status	RESTRICTED
tracker_workflowevent	Append-only audit log of every stage transition - actor, previous stage, new stage, UTC timestamp, remarks	RESTRICTED
tracker_commissiontask	Post-decision action items - linked to submission, assigned to OPSC Manager and staff, due date, status	OFFICIAL
tracker_commissiontaskupdate	Progress updates on commission tasks - actor, update text, timestamp	OFFICIAL

Commission Operations Tables

Table	Purpose	Classification
tracker_meeting	PSC meeting records - date, type (Ordinary/Special), status (Scheduled/In Progress/Completed/Cancelled)	OFFICIAL
tracker_agendaitem	Submissions linked to a meeting's agenda - ordering and status	OFFICIAL

System Configuration Tables

Table	Purpose	Classification
tracker_systemsetting	Key-value store for runtime configuration - SMTP settings, password policy, feature flags	OFFICIAL

Security and Audit Tables

Table	Purpose	Classification
tracker_auditlog	System-wide audit trail - actor, action type, resource type, resource ID, IP address, timestamp, description	RESTRICTED
tracker_securityincident	Security incident records - title, severity, status, description, responder, resolution	RESTRICTED
tracker_securityscan	Vulnerability scan results - scan type (SAST/CVE), findings, severity counts, timestamp	RESTRICTED
tracker_securitynotice	Admin-created system-wide notices - type (info/warning/critical/maintenance), active flag, expiry	OFFICIAL

5.4 Workflow Stage Reference

The submission lifecycle is tracked through 22 discrete stages across five categories:

Pre-Submission (Ministry-created)

Stage Value	Display Name	Description
draft	Draft	Ministry staff are composing the submission; not yet sent to PSC
submitted	Submitted to PSC	Ministry has submitted; awaiting PSC intake officer review

PSC Intake

Stage Value	Display Name	Description
received_by_psc	Received by PSC	PSC intake officer has received the submission
returned_for_clarification	Returned for Clarification	PSC has returned the submission requesting additional documents or clarification
registered_routed	Registered and Routed	Submission is registered with a reference number and routed to the appropriate unit

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

manager_checklist_review	Manager Checklist Review	Line manager is performing a compliance checklist review
under_assessment	Under Assessment	Formal 21-working-day assessment period has begun

Hold / Deferral States

Stage Value	Display Name	Description
deferred	Deferred	General deferral pending further information
tabled	Tabled	Commission has tabled the item - no immediate decision
awaiting_legal_advice	Awaiting Legal Advice	Referred to legal counsel before proceeding
awaiting_cabinet_decision	Awaiting Cabinet Decision	Requires Cabinet approval before a commission decision can be recorded

Commission

Stage Value	Display Name	Description
resubmitted	Resubmitted	Ministry has resubmitted following a previous deferral or return
forwarded_to_commission	Forwarded to Commission	Assessment complete; item placed before the Commission
commission_sitting	Commission Sitting	Item is currently being deliberated at a commission sitting
approved	Approved	Commission has approved the submission
rejected	Rejected	Commission has rejected the submission
returned	Returned	Commission has returned the submission to ministry without decision

Post-Decision

Stage Value	Display Name	Description
-------------	--------------	-------------

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

minutes_drafted_signed	Minutes Drafted and Signed	Commission sitting minutes are drafted and signed off
decision_entered_assigned	Decision Entered and Assigned	Decision formally entered and assigned to an OPSC Manager
under_implementation	Under Implementation	Assigned staff are executing the decision
implementation_report	Implementation Report	Implementation is complete; report submitted

5.5 Personal Data Handling

The SCDMS holds the following personal data elements:

Data Element	Purpose	Retention
Staff username	System authentication and audit attribution	Duration of employment
Staff email address	Account management and 2FA OTP delivery	Duration of employment
PBKDF2-SHA256 hashed password	Authentication - plaintext never stored	Duration of employment
Previous password hashes (history)	Reuse prevention security control	Configurable - default 5 entries
Role and ministry assignment	Access scoping and workflow permissions	Duration of employment
Profile picture (optional)	User identification within the system	Duration of employment
IP address (audit logs)	Security attribution for audit events	90 days

No citizen personal data is stored. The system manages administrative HR cases between government entities. All users are government employees operating in their official capacity.

6. Security Architecture

The SCDMS security architecture is designed in alignment with the Vanuatu Cybersecurity Strategy 2030 and ISO/IEC 27001:2022 information security management principles.

6.1 Authentication

Control	Implementation
Protocol	JSON Web Tokens (JWT) - RFC 7519
Access token lifetime	30 minutes
Refresh token lifetime	7 days (rotated on each use)
Token rotation	Refresh tokens rotated on each use; previous token blacklisted immediately
Token blacklisting	simplejwt blacklist app - prevents replay of old refresh tokens after rotation
Transport	HTTPS only - tokens never transmitted over plain HTTP
Storage	Browser localStorage
Inactivity timeout	15-minute client-side inactivity timer - automatic logout with session flag for re-login banner
Last login tracking	Django UPDATE_LAST_LOGIN = True - login timestamp maintained per user

6.2 Two-Factor Authentication (2FA)

2FA infrastructure is fully implemented and operational. It is not yet mandated by default, pending an OPSC management policy decision.

Component	Implementation
OTP generation	6-digit numeric code, cryptographically random
OTP delivery	Email to registered address (configured via System Settings SMTP)
OTP expiry	Configurable - default 10 minutes
OTP rate limiting	5 requests per minute per IP (OTPRequestThrottle)
Verification rate limiting	10 attempts per minute per IP (OTPVerifyThrottle)
Token on success	Full JWT access + refresh token pair issued on successful OTP verification
Activation	Single configuration flag TWO_FACTOR_REQUIRED - no code change required

The IPDU recommends that 2FA be mandated for all accounts at go-live and requests DCDT guidance on whether this is a compliance requirement under the Digital Transformation Act.

6.3 Account Lockout - Brute-Force Protection

Control	Implementation
Library	django-axes $\geq$ 6.0
Failure threshold	5 consecutive failed login attempts
Lockout scope	User + IP address combination
Lockout duration	1 hour (configurable via AXES_COOLOFF_HOURS environment variable)
Counter reset	Automatically reset on successful authentication
Login rate limiting	django-ratelimit on token endpoint - configurable via LOGIN_RATE_LIMIT environment variable (default: 5 per minute per IP)

6.4 Authorisation - Role-Based Access Control

The system implements a 12-role RBAC model enforced server-side on every API endpoint. Frontend role gating is a UX measure only - all authorisation is enforced in Django and cannot be bypassed from the browser.

Role	Access Scope	Primary Capabilities
PSC Administrator	Full system	All capabilities including user management, role management, system configuration, security audit
PSC Officer	Operational workflow	Create submissions, assess, manage intake workflow transitions
PSC Secretary	Secretariat	Manage meetings, agenda, record decisions, issue notifications, create submissions
PSC Commissioner	Commission deliberation	View submissions, record formal outcomes (Approve, Reject, Return, Table, Defer, Refer for Legal Advice)
OPSC Manager	Post-decision	Receive allocated decisions from Secretary, assign tasks to Principal/Senior Officers

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Principal Officer	Implementation	Execute allocated tasks, update implementation status and reports
Senior Officer	Implementation	Assist task execution, contribute to implementation reporting
Ministry HR Officer	Ministry-scoped only	Create draft submissions for own ministry, submit to PSC, respond to clarification requests
Department Admin Officer	Department-scoped only	Create draft submissions for own department, submit to PSC, respond to clarification requests
PSC Manager	Operational management	Manage checklist review stages, assign post-decision work, monitor implementation progress
VIPAM Manager	VIPAM-scoped only	Manager checklist review for VIPAM-routed submissions
HR Unit Manager	HR-scoped only	Manager checklist review for HR-routed submissions
Compliance Manager	Compliance-scoped only	Manager checklist review for compliance-routed submissions

Role Transition Permissions Matrix

Role	Can Create Draft	Can Submit to PSC	Can Assess	Can Forward to Commission	Can Record Decision	Can Manage Post-Decision
PSC Admin	✓	✓	✓	✓	✓	✓
PSC Officer	✓	-	✓	-	-	-
PSC Secretary	✓	-	✓	✓	-	✓
PSC Commissioner	-	-	-	-	✓	-
OPSC Manager	-	-	-	-	-	✓
Principal Officer	-	-	-	-	-	✓ (impl. only)
Senior Officer	-	-	-	-	-	✓ (impl. only)
Ministry HR	✓ (own ministry)	✓	-	-	-	-
Dept Admin	✓ (own dept)	✓	-	-	-	-
PSC Manager	-	-	-	-	-	✓

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

VIPAM Manager	-	-	-	-	-	-
HR Unit Manager	-	-	-	-	-	-
Compliance Manager	-	-	-	-	-	-

6.5 Password Security

Control	Standard Applied	Implementation
Hashing algorithm	PBKDF2-SHA256 with random salt	Django default - NIST SP 800-63B compliant
Minimum length	Configurable - default 8 characters	Enforced at API serializer and validator level
Complexity requirements	Admin-configurable	Require uppercase, lowercase, digits, and special characters - each independently configurable
Complexity enforcement	Server-side	validate_complexity() in tracker/validators.py - raises validation error with per-rule failure list
Real-time frontend indicator	Per-rule checklist	Account settings page shows pass/fail for each active rule as user types
Password history	Configurable count	PasswordHistory model stores PBKDF2 hashes of previous N passwords; reuse rejected on change
Reset mechanism	Single-use token, 1-hour expiry	Token generated, emailed to user; link contains opaque token; plaintext never transmitted
Reset rate limiting	5 requests per minute per IP	PasswordResetThrottle applied to both request and confirm endpoints
Change rate limiting	10 changes per minute per user	PasswordChangeThrottle applied to the change-password endpoint
Plaintext storage	Never	Passwords hashed immediately on receipt; plaintext discarded

Password policy parameters (minimum length, required character classes, history count) are managed by PSC Administrators through the System Configuration interface without any code deployment.

6.6 API Rate Limiting and Throttling

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

All sensitive endpoints are protected by Django REST Framework throttle classes in addition to the django-ratelimit login protection:

Endpoint	Throttle Class	Rate	Scope
POST /auth/otp/request/	OTPRequestThrottle	5 per minute	Per IP address
POST /auth/otp/verify/	OTPVerifyThrottle	10 per minute	Per IP address
POST /auth/password-reset/request/	PasswordResetThrottle	5 per minute	Per IP address
POST /auth/password-reset/confirm/	PasswordResetThrottle	5 per minute	Per IP address
POST /me/change-password/	PasswordChangeThrottle	10 per minute	Per authenticated user
POST /auth/token/ (login)	django-ratelimit	5 per minute (default)	Per IP address
All anonymous endpoints	AnonRateThrottle	300 per minute	Per IP address
All authenticated endpoints	UserRateThrottle	600 per minute	Per user

6.7 Sensitive Data Masking

System configuration values whose key name contains the substrings PASSWORD, SECRET, TOKEN, KEY, PRIVATE, or CREDENTIAL are automatically masked in all API responses. The API returns instead of the actual value for these fields. This applies to SMTP passwords, API secrets, and any other sensitive configuration stored in the SystemSetting table. Administrators must use the server console or environment variables to set such values; the web UI cannot be used to read them back.

6.8 Audit Trail

Every significant system action is recorded in the tracker_auditlog table with the following fields:

- Actor username (the authenticated user who performed the action)
- Action type (LOGIN, LOGOUT, LOGIN_FAILED, LOCKOUT, CREATE, READ, UPDATE, DELETE, BACKUP, RESTORE, SETTINGS, PASSWORD_CHANGE, 2FA, PERMISSION, EXPORT, DOWNLOAD)
- Resource type and resource ID

*All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen*

- Human-readable description
- Client IP address
- UTC timestamp

Every workflow stage change is additionally recorded in the `tracker_workflowevent` table with:

- Submission reference number
- Actor user reference
- Previous stage and new stage
- Exact UTC timestamp
- Free-text remarks entered by the actor

Neither table provides an API endpoint for editing or deletion. Physical deletion requires direct database administrator access. The audit log is displayed to authorised users in the Security module with filtering by actor, action type, resource, and date range.

6.9 Security Incident Management

The system includes a full security incident lifecycle module:

Field	Options
Severity	Low, Medium, High, Critical
Status	Open → Investigating → Resolved → Closed
Responder	Assigned authenticated user
Fields	Title, description, affected systems, resolution notes, timestamps

PSC Administrators can create, update, assign, and close incidents. All incident changes are recorded in the audit trail.

6.10 Vulnerability Scanning

The system includes an automated vulnerability scanning module:

Scan Type	Tool	What It Checks
Static Application Security Testing (SAST)	Bandit 1.7	Python source code for common security weaknesses (hardcoded secrets, unsafe functions, injection patterns)
Dependency CVE Scanning	pip-audit 2.6	All installed Python packages against the OSV and PyPI Advisory databases for known CVEs

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Scans are run:

- On demand by PSC Administrators from the Security module interface
- Automatically on a scheduled basis via Celery + django-celery-beat (configurable interval)

Scan results are stored in the tracker_securityscan table with severity breakdowns (Critical, High, Medium, Low) and are displayed in the Security module's Vulnerability Scan tab. Scan history is retained for trend comparison.

6.11 System Security Audit

The endpoint GET /auth/security-audit/ (PSC Administrator access only) performs live configuration health checks and returns a pass/warn/fail result for each:

Check	Pass Condition
DEBUG mode disabled	DEBUG = False
SECRET_KEY strength	Key length $\geq$ 50 characters and not a default/insecure value
HTTPS redirect enabled	SECURE_SSL_REDIRECT = True
HSTS configured	SECURE_HSTS_SECONDS $\geq$ 31,536,000 (1 year)
Session cookie secure	SESSION_COOKIE_SECURE = True
CSRF cookie secure	CSRF_COOKIE_SECURE = True
CORS restricted	CORS_ALLOW_ALL_ORIGINS = False
ALLOWED_HOSTS restricted	No wildcard * in ALLOWED_HOSTS

Results are displayed in the System Audit tab of the Security module with colour-coded pass/warn/fail indicators.

6.12 API Inventory

The endpoint GET /auth/api-inventory/ (PSC Administrator access only) returns a live list of all registered URL patterns in the application, including path, route name, and handler class. This enables administrators to audit which endpoints are exposed and verify that no unintended routes have been added.

6.13 Security Notices

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

PSC Administrators can create system-wide security and operational notices that are displayed to all authenticated users as dismissible banners at the top of every page. Each notice has:

- **Type:** Information, Warning, Critical, Maintenance
- **Active flag:** Administrators can activate or deactivate notices without deleting them
- **Expiry date/time:** Notices automatically become inactive after their expiry
- **Dismissal:** Users can dismiss a notice per session (stored in sessionStorage - reappears on next login)

This provides a broadcast channel for informing staff of security events, scheduled maintenance, or policy changes without requiring email.

6.14 Phishing and Social Engineering Awareness

A Phishing Awareness module is available to all authenticated users under the Security section. It presents curated, collapsible educational guidance across four categories:

1. Email red flags - how to identify phishing emails
2. Social engineering tactics - common manipulation techniques
3. Safe practices - what to do and not do
4. Reporting - how to report a suspected incident

This satisfies the user security awareness requirement and supports the OPSC's obligations under the Cybersecurity Strategy 2030.

6.15 Transport Security

Control	Implementation
TLS version	1.2 minimum, 1.3 preferred - terminating at Nginx
HSTS	Configured on Nginx for production
CORS	Restricted to the DCDDT-provisioned government hostname
X-Frame-Options	DENY - prevents clickjacking
X-Content-Type-Options	nosniff
XSS protection	Django SECURE_BROWSER_XSS_FILTER enabled

6.16 Django Production Security Configuration

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Setting	Production Value
DEBUG	False
SECRET_KEY	Randomly generated 50-character key, stored as environment variable - never committed to source
ALLOWED_HOSTS	Restricted to the provisioned government hostname
CSRF_COOKIE_SECURE	True
SESSION_COOKIE_SECURE	True
X_FRAME_OPTIONS	DENY
SECURE_CONTENT_TYPE_NOSNIFF	True
SECURE_SSL_REDIRECT	True
SECURE_HSTS_SECONDS	31,536,000 (1 year)
Database credentials	Environment variables - never committed to source code
SMTP credentials	Environment variables - masked in API responses

7. Application Feature Reference

7.1 Submission Management

Feature	Description
Draft creation	Ministry HR and Department Admin users create submissions as drafts, scoped to their own ministry/department
Automatic reference numbering	Unique reference numbers allocated sequentially (ReferenceCounter model - atomic allocation)
22-stage workflow	Full lifecycle from Draft through to Implementation Report
Returned for Clarification	PSC can return incomplete submissions to ministry with remarks; ministry resubmits after addressing issues
Assessment deadline	21-working-day deadline calculated from assessment start date, excluding weekends
Overdue indicator	Submissions past their assessment deadline are flagged visually throughout the interface
Stage transition panel	Authenticated users see only the stage options permitted for their role

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Transition remarks	Actor enters free-text remarks on every stage change - recorded in WorkflowEvent
Visual workflow timeline	Submission detail page displays colour-coded vertical timeline showing every stage transition with actor, timestamp, and remarks
Document attachments	File uploads associated with submissions (served via Django media)
Submission log	Searchable, filterable table of all submissions visible to the requesting user
CSV export	PSC staff can export visible submissions to CSV with audit logging

7.2 Commission Operations

Feature	Description
Meeting management	Create, edit, and cancel PSC meetings; classify as Ordinary or Special Sitting
Meeting status	Scheduled → In Progress → Completed / Cancelled
Agenda items	Link specific submissions to a meeting agenda with ordering and status
Decisions log	Historical view of all commission decisions filterable by ministry and outcome
Commission tasks	Post-decision tasks created by Secretariat, assigned to OPSC Managers
Task assignment	OPSC Managers assign work to Principal and Senior Officers with due dates
Task status tracking	Open → In Progress → Completed / Cancelled
Task updates	Officers submit progress updates recorded against each task

7.3 Analytics and Reporting

Feature	Description
KPI dashboard	Total submissions, pending count, this month's intake, average processing days
Stage breakdown chart	Submissions distributed across workflow stages
Ministry chart	Submissions by ministry (bar chart)
Monthly trend	Submission intake over time (area chart)

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Implementation status	Task completion status breakdown
Global search	Real-time search across submissions, tasks, and ministries - results scoped to user permissions, debounced 300ms, results shown inline in the header search bar

7.4 System Administration

Feature	Description
User management	Full CRUD on user accounts; role, ministry, and department assignment; profile picture upload
Ministry/Department administration	Create, edit, and delete the government organisational hierarchy
Role definitions	Admin creates named custom roles with specific permission flags
System permissions	Granular capability flags (e.g. SUBMISSION_CREATE, MEETING_MANAGE, VIEW_AUDIT_LOG)
System settings	Key-value configuration store - editable in the admin UI; sensitive values masked
Password policy configuration	Admins configure minimum length, character class requirements, and history count without code deployment
API key management	Generate, activate, deactivate, and monitor API keys for system integration
Backup and restore	On-demand database backup creation, download, and restore via the admin interface

8. Infrastructure and Hosting

8.1 Hosting Arrangement

The SCDMS will be hosted on a virtual server provisioned and managed by the DCDT at the DCDT data centre in Port Vila, Vanuatu.

Component	Host	Location
Virtual Machine (Web + App + DB)	DCDT Virtual Server	DCDT Data Centre, Port Vila
Static file serving	Nginx on DCDT VM	Port Vila
Application processing	Gunicorn/Django on DCDT VM	Port Vila

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Database	PostgreSQL on DCDT VM	Port Vila
Background job scheduling	Celery + django-celery-beat + Redis on DCDT VM	Port Vila

8.2 Virtual Server Minimum Specifications

Resource	Minimum	Recommended
vCPU	2 cores	4 cores
RAM	4 GB	8 GB
Storage (OS + Application)	40 GB SSD	80 GB SSD
Storage (Database + Backups)	20 GB SSD	50 GB SSD
Operating System	Ubuntu Server 22.04 LTS	Ubuntu Server 22.04 LTS
Network	100 Mbps internal	100 Mbps internal

These specifications support an estimated user base of up to 200 government staff across all ministries for Version 1.0.

8.3 Backup and Recovery

Parameter	Standard
Database backup tool	pg_dump (PostgreSQL native) + admin-initiated backup via Django admin interface
Backup frequency	Daily automated at 02:00 VUT
Backup retention	30 days rolling
Admin-initiated backup	Available on demand via the Backup & Restore admin module
Backup storage	DCDT backup infrastructure (to be confirmed with DCDT)
Recovery Time Objective (RTO)	4 business hours
Recovery Point Objective (RPO)	24 hours

8.4 Availability

Business hours: 99% uptime (Monday–Friday, 07:30–17:30 VUT) Planned maintenance: Outside business hours with 24-hour advance notice to users

Unplanned outages: DCDT to provide incident response under standard government SLA

9. Integration Architecture

9.1 Current Integrations (Version 1.0)

The SCDMS Version 1.0 is a standalone system. It does not integrate with any external government system. All data entry is performed manually by authorised users through the web interface.

The system exposes a documented REST API that supports API key authentication, enabling future system-to-system integration without architectural changes. API keys are managed through the administration interface.

9.2 Planned Future Integrations (Phase 2)

System	Integration Type	Purpose
HRMIS	REST API (read-only)	Pre-populate staff and post data on new submissions
Government SMTP relay	SMTP	Deliver 2FA OTP codes, password reset emails, and decision notifications
DCDT Identity Provider	OAuth 2.0 / SAML SSO	Replace local accounts with whole-of-government SSO
Cabinet system	REST API	Notify Cabinet of matters requiring Cabinet approval
National Archival System	REST API	Submit finalised decisions for archival under retention schedule

Phase 2 integrations will be subject to separate CoC submissions to DCDT as their technical architecture is defined.

10. Compliance Mapping

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Requirement	Standard / Act Reference	SCDMS Status
Certificate of Compliance obtained before implementation	Digital Transformation Act No. 42 of 2025, s.3(f)	This submission - CoC applied for before deployment
Government data hosted on government infrastructure	Digital Transformation Act No. 42 of 2025	Compliant - DCDT virtual server, Port Vila
Data sovereignty - no offshore data storage	Digital Transformation Act No. 42 of 2025	Compliant - all data on DCDT server in Vanuatu
Role-based access control	Cybersecurity Strategy 2030	Compliant - 12-role RBAC enforced server-side on all endpoints
Audit logging of all significant actions	Government records management policy	Compliant - dual audit trail: AuditLog + WorkflowEvent; append-only
Encryption in transit (TLS)	Cybersecurity Strategy 2030	Compliant - TLS 1.2+ via Nginx
Encryption at rest	Cybersecurity Strategy 2030	Pending - DCDT to confirm disk encryption on VM
Multi-factor authentication	Cybersecurity Strategy 2030	Ready - fully implemented; awaiting OPSC management activation policy
Secure password storage	NIST SP 800-63B	Compliant - PBKDF2-SHA256 with salt
Password complexity policy	NIST SP 800-63B	Compliant - admin-configurable complexity rules enforced at API level
Password history / reuse prevention	NIST SP 800-63B	Compliant - configurable history count enforced at API level
Brute-force protection	Cybersecurity Strategy 2030	Compliant - django-axes 5-failure lockout + django-ratelimit
Rate limiting on authentication endpoints	Cybersecurity Strategy 2030	Compliant - DRF throttle classes on OTP, password reset, and password change endpoints

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Interoperability - open standards API	Government ICT Interoperability Framework	Compliant - standard JSON REST API with OpenAPI-compatible patterns
No proprietary vendor lock-in	Government ICT Policy	Compliant - 100% open-source stack
Source code under government control	Government ICT Policy	Compliant - IPDU-developed, version-controlled internally
User security awareness	Cybersecurity Strategy 2030	Compliant - Phishing Awareness module available to all users
Security incident management	ISO 27001:2022	Compliant - full incident lifecycle: create, investigate, resolve, close
Vulnerability management	ISO 27001:2022	Compliant - automated SAST (Bandit) and CVE (pip-audit) scanning on schedule and on demand
Configuration security baseline	CIS Benchmarks / ISO 27001	Compliant - System Security Audit endpoint with 8 live configuration checks

11. Risks and Mitigations

Risk	Likelihood	Impact	Mitigation
DCDT virtual server not provisioned in time	Medium	High	Submit server specification request to DCDT concurrently with this CoC application
Disk encryption not enabled on DCDT VM by default	Medium	High	IPDU to request confirmation from DCDT server team before go-live
MFA not mandated at go-live	Low	Medium	MFA infrastructure fully built and tested; awaiting OPSC management policy decision
Government SMTP relay unavailable for email	Medium	Low	Admin-initiated password reset via admin panel available as fallback; 2FA can remain inactive

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

Insufficient VM resources under load	Low	Medium	Specifications selected with 3× headroom above estimated baseline load
Celery beat scheduling conflict under multi-process Gunicorn	Medium	Low	Celery + django-celery-beat uses database-backed scheduler; Redis broker coordinates across workers
Ministry staff creating submissions outside their scope	Low	Medium	Submission creation for ministry users enforces ministry_id and department_id from their profile at the backend - cannot be overridden by the browser
Sensitive configuration values exposed via API	Mitigated	High	SystemSettingSerializer masks any key matching PASSWORD, SECRET, TOKEN, KEY, PRIVATE, CREDENTIAL with
Brute-force attacks on OTP verification	Mitigated	High	OTPVerifyThrottle limits to 10 attempts per minute per IP; OTPRequestThrottle limits OTP issuance to 5 per minute

12. Items Requiring DCDT Confirmation

#	Item	Required From	Notes
1	Virtual server provisioning (see Section 8.2 for specifications)	DCDT Infrastructure	Required before deployment
2	Government hostname / subdomain (e.g., scdms.psc.gov.vu)	DCDT	Required before TLS certificate
3	TLS certificate provisioning for the hostname	DCDT	Required for HTTPS
4	Confirmation of disk-level encryption on DCDT VMs	DCDT	Required for encryption-at-rest compliance
5	Availability of DCDT backup service for this VM	DCDT	Required for RPO/RTO targets
6	Government SMTP relay access for OTP and email notifications	DCDT	Required for 2FA and password reset emails

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRÉTAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

7	Whether MFA is mandatory under current DCDT compliance policy	DCDT	Will determine activation timeline
8	Network policy for outbound connections from DCDT VM to pypi.org / osv.dev	DCDT	Required for pip-audit CVE database lookups during vulnerability scans

13. Conclusion and Formal Request

The Office of the Public Service Commission respectfully submits this Technical Design Document to the Department of Digital and Communications Technology and formally requests the issuance of a Certificate of Compliance under Section 3(f) of the Digital Transformation Act No. 42 of 2025.

The OPSC and its IPDU confirm that:

- This submission is made before any production deployment in compliance with the Act
- The SCDMS will be hosted exclusively on DCDT infrastructure in Vanuatu, ensuring full data sovereignty
- The system is built on a 100% open-source technology stack with no proprietary vendor dependency
- A 12-role server-side RBAC model and dual audit trail (AuditLog + WorkflowEvent) are fully implemented
- Password security controls meet NIST SP 800-63B requirements: PBKDF2-SHA256 hashing, complexity policy, and reuse prevention
- Rate limiting is implemented on all sensitive authentication endpoints
- 2FA capability is built, tested, and ready to activate subject to OPSC management policy guidance
- Security incident management and automated vulnerability scanning (SAST + CVE) are operational
- A Phishing Awareness module is available to all staff to support Cybersecurity Strategy 2030 awareness obligations
- System configuration is protected by a live security audit endpoint and sensitive value masking
- All code is developed in-house by IPDU staff with no external contractor access to production data
- The OPSC acknowledges the powers of the Director under Section 6(2)(b) and has voluntarily paused production deployment pending receipt of the CoC

All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.
Adresim evri komiunikesen i go long Sekretari, Pablik Sevis Komisen

The IPDU is available to provide any additional technical documentation, arrange a technical briefing or system demonstration for DCDT technical officers, or attend a compliance review meeting at the DCDT's convenience.

Appendix A - Contact Information

Role	Name	Signature
Authorising Officer	Jean Yves Bibi	Director IPDU / Acting Secretary
Project Lead / System Owner	Herman Tevilili	Principal Innovation and Digital
Technical Lead (Development)	Herman Tevilili	Principal Innovation and Digital

This document is classified RESTRICTED - Government Use Only. It is submitted solely to the DCDT for the purpose of Certificate of Compliance assessment under the Digital Transformation Act No. 42 of 2025 and must not be distributed further without the written approval of the Office of the Public Service Commission.

*All correspondences should be addressed to the SECRETARY, Public Service Commission / Toutes correspondances doivent être adressées au SECRETAIRE, Commission de la Fonction Publique.

Roles & Permissions

The Roles & Permissions page allows administrators to manage users, roles, and permission definitions. It features a sidebar with navigation options: SUBMISSIONS (Dashboard, Submissions, Reports), COMMISSION DECISION (Meetings, Agenda, Decisions, Task management, Notifications), and ADMINISTRATION (Roles & Permissions, Ministries & Departments, API Keys, System Config, Security, Backup & Restore). The main content area includes a 'Administration' section with tabs for Users, Roles, and Permissions. The 'Roles' tab is active, showing a list of system roles: Department Admin Officer, Ministry HR Officer, Principal Officer, PSC Administrator, and PSC Commissioner. The 'Ministry HR Officer' role is selected, showing its description and a list of permissions (3 assigned). The permissions list includes: Create Submission, Edit Submission, Export Submissions, View Submissions (checked), and Assess Submission.

Role	Description	Permissions
Department Admin Officer	Views submissions relevant to their department only.	2 permissions, 0 users
Ministry HR Officer	Submits cases on behalf of their ministry and monitors submission status.	3 permissions, 7 users
Principal Officer	Executes tasks allocated by the OPSC Manager; updates implementation status and reports on progress to the Manager.	3 permissions, 0 users
PSC Administrator	Full system access — manages users, roles, submissions, and all workflow stages.	20 permissions, 1 user
PSC Commissioner
